

— s = 1 seed — s = 3 seeds — s = 5 seeds - - - fold dependence $\rho = 0.5$ (K_{eff}) K of this study

Two-sided paired t over domains, $\alpha = .05$; $\sigma_{\Delta}^2 = \sigma_{\text{dom} \times \text{arm}}^2 + \sigma_{\text{run, diff}}^2 / s$, from the median- σ_{Δ} training arm of each cohort.

Lines end where $K > 1,000$.
